Title: - Analyzing Human Behavior in Booking the type of Hotel.

Internal Guide: - Prof. K.D. Yesugade.

External Guide: - Mr. Prahlad Rajpurohit (Business Analyst).

Sponsored Company: - Device App.

Technology Used: R Programming.

Introduction : - Recommendation system recommends the item based on user feedback, reviews and various other features, an algorithm to evaluate the best-suited item for the user. The aim of our project was to utilize the user information as a data set in predicting the type of hotel, he will book in future. There are two sets of dataset train and test, the training dataset helps the test dataset in determining the result. Analysing human behaviour involves the algorithm like the hypothesis testing, which is approved and disapproved after every inference. Our main goal is to predict human behaviour in booking the type of hotel, if the user is a regular customer of Expedia, his behaviour can be easily predicted but the challenge comes, when a new user gets registered and his behaviour we have to find. In our paper, we have proposed hypothesis testing to validate the inference drawn after validating the dataset
