Futurz Staffing Solutions (Bajaj Finserv Ltd - Clientside) (July 2019-present)

FinnOne Application Development and Support. IT Support Associate

FINNONE Customer Acquisition System (CAS) is used to provide operational support, risk management and decision-making support to banks and financial service companies. It is a comprehensive loan origination software which controls and automates various business processes/activities performed in processing of a loan by focusing on both retail and corporate loans.

Responsibilities and task:

- ❑ Script creation and modification in SQL for functionality to extract impacted loan cases with specific scenarios as well as do the data rectification of these impacted cases and find RCA (Root Cause Analysis) to resolve it permanently.
- ❑ Preparing data repair patch in PL/SQL for any sudden issue arrival to resolve it on immediate basis for business continuation.
- ❑ Resolving production issues in an effective manner. Involve in Testing of production issues also.

Customer Account Number Length in LOS & LMS Module. Software Engineer

In these projects, we have Tested the Customer Bank account number field length in Finnone Application. For various modules, LMS, PDC, We have tested all sources of upload likes, HTS, REMI & POS with all possible transactions & scenarios.

Responsibilities and task:

- ❑ Analysis on the specifications provided.
- ❑ Preparing the Test Scenarios and Test Cases Maintaining daily status reports on test execution for the respective module.
- ❑ Interacting with the business and product team for understanding the end-to-end process for requirement analysis and scope.
- ❑ Integration Testing. with the SFDC module.
- ❑ Prepared and sent daily reports – test execution report and bug report to IT-Chief, National Head and PMO.

Achievements
